

Blood

**Do recruitment signals recur
in independent patients?**

Initial comparison

3 GBS cohorts
Whole blood, leukocytes and monocytes

Independent monocytes

4 GBS and 3 controls
Same donors also assessed as PBMCs
and sorted cell preparations

Separate PBMC reanalysis

12 acute GBS and 5 controls
8 paired follow up samples
Possible cohort overlap assessed

Cerebrospinal fluid

**Do published proteins show
related immune changes?**

Independent source cohorts

2 GBS protein cohorts
11 proteins with paired estimates

Protein synthesis

Source estimates and pooled effects
Uncertainty assessed across models

Direct disease comparisons

16 reported estimates
GBS, CIDP and healthy controls
Within the replication cohort

Peripheral nerve

**How does macrophage composition
relate to the Fc score difference?**

Atlas macrophages

9 CIDP and 11 CIAP donors
State composition and Fc expression

External whole nerve

4 CIDP and 9 VN biopsies
Internal atlas check
9 CIDP and 5 VN donors

Macrophage marker index

20 genes assessed in 37 atlas donors
Donor and centre exclusions
External composition adjustment
